Booking a ticket online.

Nara and her friends plan to go on holiday to Surabaya. One of his friends suggested taking the train to make the trip more comfortable. They decided to order train tickets online in advance via the available applications.

In the application, they found several departure schedules. Because you want to leave in the morning, there are two train options available, namely the executive train and the economy train. Executive trains offer more comfort with higher fares and arrival times that are one hour earlier than economy trains.

After making a choice between executive or economy trains, the first step before ordering a ticket is to enter your personal identification. The information required includes name, identity number (NIK), cellphone number and address.

After entering their identity data, they can select the desired seat. Then proceed to the payment stage according to the type of ticket selected.

After successful payment, prospective passengers will get a train ticket barcode. This barcode can be printed or saved in digital form to be sent to the platform entry counter on the day of departure.
